

# In The Garden:

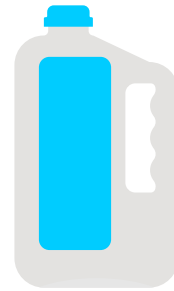

## Make a milk bottle watering can

All our plants need water to live. Make your own watering can from an old plastic bottle!

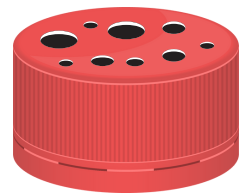

### Materials:

- Milk Bottle or Juice Bottle
- Soap
- Toothpick
- Textas

**Step 1:** Wash out your bottle with hot soapy water to get rid of any leftover milk or juice.

**Step 2:** Remove the plastic lid, and use your toothpick to put small holes in the lid. About 10 holes will do.

**Step 3:** Fill the bottle with water

**Step 4:** Screw the lid back on and start watering your plants!

**Extra Step:** If you would like to decorate your watering bottle use some textas and permanent markers. Maybe you could draw some insects or flowers on your new watering bottle!
